

TASK - 7 Create and Delete S3 bucket using CLI.

Step 1 - Using SSH key connect AWS instance to local cmd

```

Downloads — ec2-user@ip-172-31-24-225:~ — ssh -i sever-instance-key.pem ec2-user@ec2...

remove_bucket: kalpesh-task7-bucket-20250904
```

Step 7- Verify

```

A terminal window titled "Downloads — ec2-user@ip-172-31-24-225:~" displays a series of commands and their outputs. The user connects via SSH to an Amazon Linux 2023 instance. They run 'ls' which shows a broken pipe error. Then they attempt to configure the AWS CLI with default settings, but fail at the 'make_bucket' step due to missing credentials. Finally, they successfully configure the CLI with specific access keys and create a bucket named 'destination-bucket-amazr'.

Downloads — ec2-user@ip-172-31-24-225:~ — ssh -i sever-instance-key.pem ec2-user@ec2-18-205-246-142.compute-1.amazonaws.com — 160x50
